### ERE Club Memo

Hello, I am writing this memo to describe my experience at one of the Engineering club meetings.

I attended the ERESA meeting this Wednesday after my Engineering 115 Class. It was scheduled right after class in the same building so, it was easy to get there. The meeting felt like it was going to be pretty simple. There were about 20 people in attendance, most arrived after the scheduled meeting time. I sat at the surrounding tables and we started when there was a good amount of people and the officers were present. We all introduced ourselves in the beginning and were able to fill out a sign in sheet. They began to talk about a group project I wasn't really clear on that had to do with a filter. Everyone was pretty cool and the time went by fast. There was someone speaking from the speakerphone of a cell phone throughout the meeting. I believe he was one of the officers from the club and was not able to attend. After that, the meeting continued to be about the local group project. I'd like to know more about that project that they were speaking about and how to help out with that. I want to continue to go to the club meetings in the future so, I hope to learn more about how to be apart of it. I found it helpful that this club was centered about one specific major. I feel that having clubs like these helps students find out more information about their future and all the possibilities and connections you could make by attending these meetings. Attending these clubs will help me as an ERE student because it is a club that does activities related to that specific field and most people seem to have the same classes that are in it. I had a pretty great experience attending this club for the first time. It was nice to know that there are many different outlets that can help you decide the field of study that you may have passion for. I received some good information and I hope I am able to contribute and be apart of the ERESA in the future as well as other clubs.
