To Whom It May Concern,

Uthman Alnuman was a student in my Intro to Civil Engineering Design course at Salt Lake Community College. He critical thinking was sound and his math skills were at the top of the class. He went above and beyond with calculations in his design problems for weekly homework assignments.

My course requires a Final Project of re-designing a lock for the Panama Canal. The class is broken up into three member teams. Uthman performed all the calculations for flow quantities through the lock, the load capacity of the lock, and soil calculations to prevent against landslides at the lock location. He was integral to his team and his project received full credit.

In my opinion, Uthman will do very well in his school of choice. He is a great student.

Sincerely,

Korin M. Holden, Ph.D.; P.E.
